

UPS-as-a-Service

Transition to an outcome-based subscription model without upfront capital investment

In today's digital-centric economy, our outcome-based service enables companies to achieve business continuity without heavy upfront capital outlay while increasing return on investment of UPS assets.

UPS is essential in IT & data center infrastructure as it provides protection from power disruptions. However, due to the complexity of managing and procuring UPS, companies are continually exposed to higher operational risks and unexpected downtime costs.

NaviX Solutions launches an innovative UPS-as-a-Service (UPSaaS) subscription-based service which addresses all of these challenges, enabling the adoption of best-in-class UPS technology to safeguard your critical infrastructure and aligning to your sustainability goals through a monthly subscription.

33% of business disrupting outages were due to on-site power failures

Studies have shown that these outages could have been avoided by:

- Regular maintenance
- Real-time tracking and monitoring of performance
- Technology refresh of End-of-Life components
- Introduction of new energy efficient UPS technologies

Traditional CAPEX Model	VS	UPS-as-a-Service
High Upfront Capital Investment		Monthly Subscription Fee
Reactive Maintenance & Repair		Proactive + Analytics
Aged Infrastructure		Upgrade & Replacement of End-of-Life Assets
Resource Intensive		Subject Matter Expertise & Manpower Support
Over-provisioned Capacity		Right-sizing and Agile Provisioning

How it works

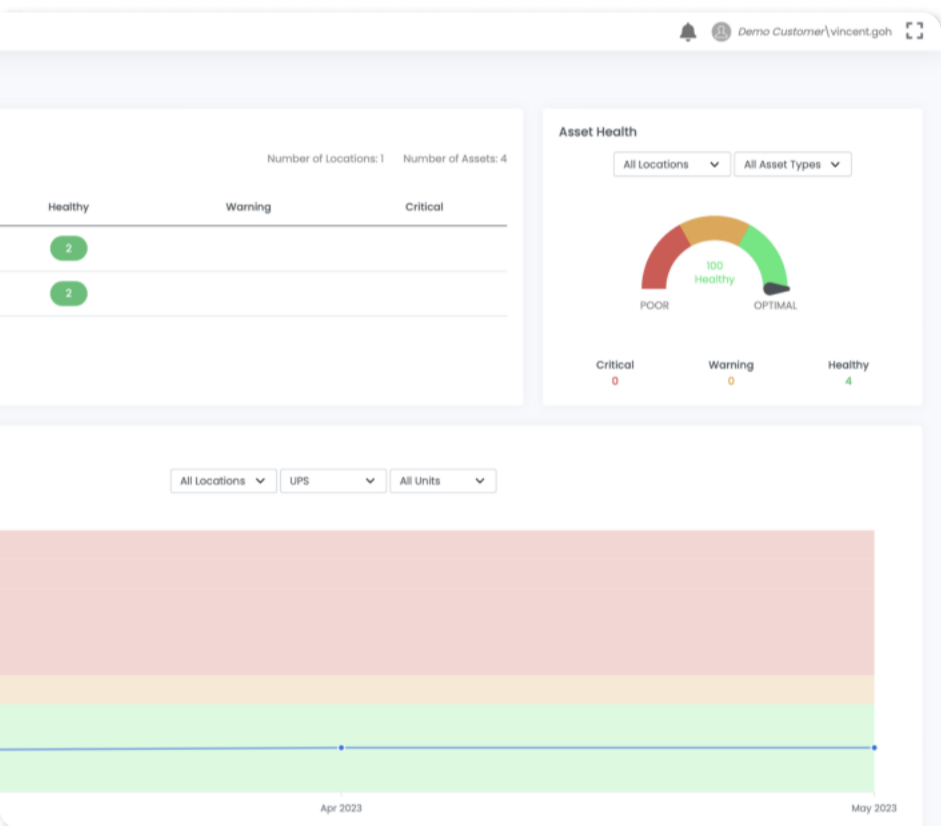

By incorporating all of the features below for a single monthly subscription fee, you will get:

Best-in-class UPS & Battery Technology

Refresh your digital infrastructure with new UPS technology which is compact, longer-lasting, and more energy efficient.

-  Up to 99% efficiency with our best-in-class 3PH UPS and 1PH Edge/1U with a smaller carbon footprint.
-  Greater asset performance with Lithium-Ion battery and modular technology that allows you to scale as you grow.

Unified Digital Platform

Consolidated dashboard providing real-time insights and condition-based analytics for your critical assets.

-  Access to a database with 100,000,000,000+ of data centre records to benchmark your UPS performance.
-  Greater insights on the health of the critical components.

Services Expertise

Get access to highly-qualified and skilled professionals that fully manage your UPS.

-  Proactive maintenance and comprehensive servicing with no hidden costs.
-  Expertise from Design & Capacity Planning to Operational Support.
-  Single point of contact via a customer success manager.
